What is the iMod™?

The iMod™ is a wire management system which allows for the organization and concealment of computer wires within a compartment located on the backside of each unit. A removable modesty cover provides easy access and protection of your electrical and data requirements.

Modesty Cover Options

Perforated Metal

Metal modesty panel with perforation for maximum air flow to all computer peripherals.

Laminate
Matching Laminate modesty panel for a clean polished look for any environment.

Users no longer need to worry about getting their feet tangled in cables.

The concealing modesty panel removes any wires from sight and creates an organized and clutter-free look to any room.

Our engineers have incorporated a variety of grommets, wire pass-through cutouts, and a wire management channel to keep your wires where they need to be.

iMod™ Benefits & Options

- Provides added security and safety
- Locking Modesty Panels Available
- Available on units with or without a Visual Display Option
- Choice of Laminate or Perforated Metal Modesty Panels
- Each unit has a 6 Plug Powerstrip located inside the iMod™ compartment
- Allows easy access to the CPU
